

V&V5 — Operational Validity
 χ^2 + paired-t + Holm-Wilcoxon

χ^2 per rack — restricted ($\chi^2=16.11$, $p=9.66e-02$)

Cochran's rule: Cochran's rule violated: 10 of 11 cells have expected count < 5 — [('A', 1.03), ('B', 0.66), ('C', 1.0), ('D', 2.4), ('F', 1.38), ('G', 2.59), ('H', 1.18), ('I', 0.13), ('J', 0.19), ('U', 0.13)]. Chi-square p-value is approximate; consider Fisher's exact or pooling low cells.
